Intended for indoor use

BAG PREPARATION INSTRUCTIONS

1. Take the bag out of the box and lay it flat on the ground. Make sure to have your stand nearby.

2. Put your arm into the top portion of the bag and slide the bag onto your arm until you are able to put your arm all the way through the bag and out the bottom tree base hole. Align the bag with your tree base and slide the bag onto it.

3. Use the buckles to secure the bag onto your tree stand.

NOTE: For stands with only three legs attach Velcro straps onto two of the three legs.

4. About 10" from the base of the bag you will find a drawstring. Stuff the entire tree storage bag into its base below this drawstring. This will hide the bag while your tree is in use.

5. Use the drawstring to pull the top skirt of the bag tight. Position the top skirt of the bag directly over the stand and use it to cover the rest of the storage bag fabric until only the tree skirt portion of the bag can be seen.

6. Follow the directions from your tree manufacturer to install the tree onto the tree stand.

IMPORTANT: Make sure the tree is securely fastened into the tree base. NEVER overtighten the bolts on the tree stand that secures the tree as this could damage the trunk.

7. After the holidays you can leave all the ornaments on your tree! Then loosen the skirt drawstring and pull the storage bag out of the tree skirt.

8. Then fully open and expand the tree bag until all the bag's four sections are exposed and spread out on the ground.

Be sure to also verify that all the zippers that are located at the base of each section are un-zipped.

9. On the end of one of the four sections you will find a ring attached. Take this in one hand and then attach the hooks that are found at the other three ends. Place this assembled structure on the top of the tree.

10. With the partitions set up from the previous step you can now simply pull up and zipper shut each section to the top.

11. Your tree is almost all the way stored!

12. In the middle of the bag you will find another drawstring. Pull gently on this drawstring to further tighten and compress your tree.

CAUTION:

DO NOT LEAN BAG ON SIDE AND PULL ALL THE WEIGHT OF THE TREE ON ONE OR TWO LEGS. THIS WILL DAMAGE YOUR TREE STAND AND TREE.

Always use two people and use caution when leaning the tree over. Do not put too much pressure on the stand while tipped as this could result in damaging the trunk of the tree. Use caution when lifting the tree as it may be heavy. Use extreme caution when moving the tree up or down stairs. Whenever possible, use two or three people to store your tree.

Intended for indoor use

Please lay out all parts prior to assembly or installation.

IMPORTANT: WHICH TRUNK DO YOU HAVE?

A 1x	B 1x	C 4x	D 3x	 FLAT TRUNK
E 4x	F 4x	G 1x	H 1x	 POINTED TRUNK
I 1x	<p>Before you begin, note the bottom of your tree trunk. If you have a pointed trunk, proceed to step one in the assembly instructions and DO NOT install the cone (G). For trees with a flat-bottomed trunk, there is one additional step to ensure your tree's stability involving the cone (G). Before step three, simply rest the cone (G) in the hole on the bottom of the base collar (B). If you have already performed steps three and four, just remove the inner collar and insert the cone. Then insert the inner collar (A), which will rest on top of the cone. Proceed onto step 4 as normal.</p>			<p>MAKE SURE THE BASE OF THE TRUNK IS CENTERED IN STAND</p>

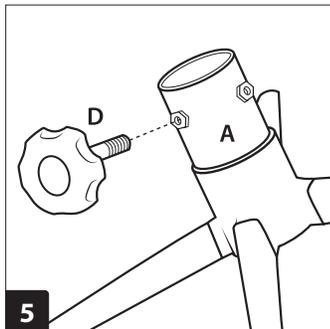

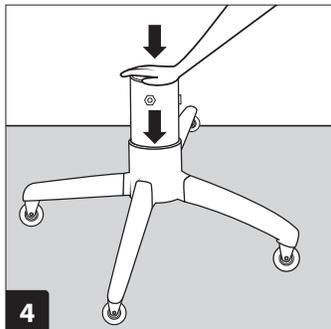

ASSEMBLY INSTRUCTIONS

1. Slide the stand leg (C) into the notched section on the base collar (B). Secure the leg to the collar with the bolts (F) and provided allen wrench (H). Repeat this step with all the legs.

2. Attach the castor (E) to each of the four legs. Tighten with the provided wrench (I).

3. Make sure the stand is sitting on a flat surface. Now, slide the inner collar (A) into the top of the base collar.

IMPORTANT: Please refer to the "Which trunk do you have?" portion of the instructions above to know if you need to use the cone (G) or not.

4. Push straight down with your hand while the stand rests on a flat surface. Make sure the metal inner collar is completely inserted all the way into the base collar. You may have to exert some pressure directly down onto the metal collar to completely slide it into place.

NOTE: Remember to keep the collar aligned while pushing.

5. Screw in all three tension knobs (D) into the stand collar through the bolt holes. Once you place your tree into the stand, tighten the knobs equally to secure the tree trunk to the stand.
