1. Slide hooks (B1 for residential doors or B2 for commercial doors) into the upper support arms (C & D). The hooks should slide into the plastic supports firmly and lay flush against them.

2. While holding the snap-locks down, slide the lower support arms (E & F) into the upper support arms until the snap locks release and hold the frame together.

Tip: Swivel the lower arms around if the snap locks don't immediately align with the holes in the upper arms.

3. Align baskets (A) above their anchors on the support arms and pull the baskets down to snap into place.

Tip: Hold the side frame with your hands and use your thumbs to pull down on the basket.
