Intended for indoor use

IMPORTANT INFORMATION

1. For trees over seven feet tall, it is likely that you will need to detach the top section of your tree before proceeding to store your tree. Refer to step 13 for instructions to store your tree topper.
2. Always remember to undo all buckles and zippers on the bag before...
 - A. You pull the bag up and over your tree to store it for the season.
 - B. You pull the bag down into tree skirt position during the season.

BAG PREPARATION INSTRUCTIONS

1. Take the bag out of the box and lay it flat on the ground. Make sure to have your tree stand nearby.

2. Insert your arm into the top portion of the bag and slide the bag onto your arm until you are able to put your arm all the way through the bag and out the bottom tree base hole. Align the bag with your tree stand and slide the bag over the top.

3. Use the Velcro straps to secure the bag onto your tree stand. *NOTE: For stands with only three legs, attach the Velcro straps onto two of the three legs.*

4. Stuff the entire tree storage bag into the base tree skirt. This hides the bag while your tree is in use during the season.

5. Use the drawstring to pull the top of the bag tight. Position the top skirt of the bag directly over the stand and use it to cover the rest of the storage bag fabric until only the tree skirt portion of the bag can be seen.

6. Follow the directions from your tree manufacturer to install the tree onto the tree stand.

IMPORTANT: Make sure the tree is securely fastened into the tree base. Never over-tighten the bolts that secure the tree to the stand. This could cause damage to the trunk.

BAG IN-USE INSTRUCTIONS

7. After the holidays are over, remove all ornaments from your tree and loosen the drawstring (mentioned in step 5). Pull the storage bag out of the tree skirt.

8. Fully open and expand the tree bag skirt until all the bag's handles are exposed and accessible on the ground.

NOTE: Be sure to also open the zippers that are located at both sides of the top of the storage bag.

9. Using two people, pull upward on the bag compressing the tree branches upward. Pull evenly and slowly--do not pull one side too hard as the tree may become uneven and fall over. Pay attention to the fabric as it might have become twisted while in storage. If this is the case, stop pulling and untwist the fabric before resuming. It might be necessary to place your foot onto the tree stand while pulling upward to steady the tree.

10. If the bag becomes tight on the tree, don't worry. This is normal. This can happen when pulling up on the storage bag to store your tree or when you pull down the bag to use during the holiday season. Simply push the branches in and carefully work the bag up or down the tree.

11. Gather the tree bag at the top and pull tight with the drawstring.

12. Carefully zip up the top of the tree bag. For extra thick trees you may need to slightly compress the tree with your hands to allow the zipper to function. Repeat on the opposite side of the bag.

13. For many trees over seven feet tall, you will need to remove the top tree section and place it into the bottom storage area as shown.

NOTE: Larger tree tops may not fit at the base of the tree.

CONGRATULATIONS!

You are now ready to move into storage. Carefully lean the tree on its side and carry the tree into storage. Please read the cautions below prior to moving your upright tree bag.

CAUTION:

DO NOT LEAN BAG ON SIDE AND PULL ALL THE WEIGHT OF THE TREE ON ONE OR TWO LEGS. THIS WILL DAMAGE YOUR TREE STAND AND TREE.

Always use two people and use caution when leaning the tree over. Do not put too much pressure on the stand while tipped as this could result in damaging the trunk of the tree. Use caution when lifting the tree as it may be heavy. Use extreme caution when moving the tree up or down stairs. Whenever possible, use two or three people to store your tree.
